

Change Parts

Allpro engineering has modified and rebuilt various machinery to suit new applications or just to get an existing machine back to standard. This can negate the cost of a completely new line by refurbishing and repurposing existing equipment with purpose designed **change parts**. This approach will typically also be significantly faster than the standard lead time for new machinery. We achieve this by dedicating ONE engineer to your project, with full in house CAD design, CNC manufacture, installation and commissioning.

Right: 3D laser scanning arm, mapping the existing machine with micron accuracy

Below: Designed parts, 3D modeled, process simulated prior to CNC machining

Above: Custom change parts, ready for installation

Above Right: Project completed, commissioned onsite
